PROTECT YOUR FAMILY AND EMPLOYEE FROM VIRUS AND BACTERIA

We do Disinfection / Sanitizing
and Fumigation services

Cleaner buildings are healthier buildings. Healthier buildings lead to healthier people and increased productivity. With the focus on health and safety, we really need to understand how cleaning, sanitizing and disinfecting help contribute favorably to this goal. Cleaning, disinfecting, and sanitizing are part of a broad approach to preventing infectious diseases. Though these terms are often used interchangeably, it is important to note that they are actually quite different.

So, what exactly is the difference between these terms?

At its elementary definition, cleaning is used to remove dirt, allergens and microorganisms from a surface and is typically completed with a cloth or wipe in conjunction with a detergent, soap or solvent. Cleaning helps reduce the number of germs that can lead to infection; however, it does not necessarily kill any germs.

Cleaning is just the first step in a complete process, but it is a vital step that cannot be skipped. Even if you intend to sanitize or disinfect the area, cleaning away visible dirt dust, fingerprints and other marks beforehand makes it easier and more effective to remove microscopic germs with more intensive methods later.

A step beyond cleaning, sanitization kills a greater amount of bacteria and is required for any surface that comes into contact with food. According to the CDC definition, a sanitizer is “a chemical that kills 99.999% of the specific test bacteria in 30 seconds under the conditions of the test. Therefore, while sanitizers can kill the majority of certain kinds of bacteria, sanitization techniques and products alone cannot eliminate all viruses.

Disinfecting a surface means that chemicals are being used to kill germs. Disinfecting does not necessarily mean that dirt, germs, and impurities are being removed from the surface, but by killing the germs, the risk of spreading infection is lowered.

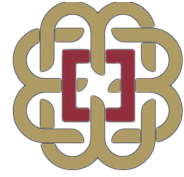

To maintain a hygienic and safe environment, make sure to complete the full regimen of all techniques from cleaning to sanitizing and disinfecting, as appropriate.

QUALITY ASSURANCE SYSTEM

Fabtech recognizes the fact that everyone in the organization has a role to play in achieving client satisfaction and it is the Management's duty to ensure that this policy is communicated to, and understood by all staff. We shall identify company objectives and review the performance of the organization against such objectives by measuring and monitoring the effectiveness of the quality management system.

A hand in a dark suit jacket is pointing upwards with the index finger. The background is a dark blue grid of glowing hexagons. The words "QUALITY ASSURANCE" are written in bold, black, sans-serif capital letters across the center of the grid, with a bright blue glow behind the text.

**QUALITY
ASSURANCE**

H.S.E. POLICY

We firmly believe that safety is essential and integral part of every activity and operation. It is the policy of our company to abide by the environmental concerns and to provide a safe and healthy work environment for all employees complying with all the requirements and recommendations of statutory and regulatory bodies. Safety at project site is assured by:

- Preparing risk analysis for every activity
- Method statement for every activity
- Strong organizational support
- Continuous monitoring and improvement in systems
- Uncompromising approach for safety awareness The commitment to Health, safety and Environment is well
